SUMMARY

Data Analyst proficient in SQL, Python, Power BI, and Tableau. Experienced in building end-to-end analytics solutions — from data cleaning and KPI modelling to interactive dashboards. Seeking a full-time data analyst role to deliver impactful, data-driven insights.

SKILLS

Languages: Python, SQL

BI & Visualization: Power BI, Tableau, Looker Studio, Excel (Pivot Tables, VLOOKUP, Charts)

Databases: MySQL, Microsoft SQL Server, BigQuery

Analytics: Exploratory Data Analysis (EDA), Data Cleaning, Statistical Analysis, KPI Reporting

Tools: VS Code, Jupyter Notebook, Google Colab

PROJECTS

Pizza Sales Analysis – End-to-End Project Apr 2026

SQL Server, Excel, Data Visualization

- Analyzed a dataset of **21K+ orders** and **\$817K+ revenue** using SQL Server to calculate KPIs — Total Revenue, AOV, and category-wise breakdowns.
- Identified peak patterns using DATE functions — **Fridays & Saturdays** and **12–1 PM / 5–8 PM**; found **Classic pizzas** and **Large size** as top revenue drivers.
- Built an **interactive Excel dashboard** connected to SQL data; cross-validated all KPIs against SQL query outputs to ensure accuracy.
- Created a **validation report** comparing dashboard figures against raw SQL results, demonstrating a professional data quality assurance workflow.

Bank Loan Analysis Dashboard Jan 2026

SQL Server, Power BI

- Analyzed **38K+ loan applications** to track portfolio health, writing SQL queries to calculate KPIs — Total Loan Amount, Amount Received, Average Interest Rate, and **DTI ratio**.
- Classified loans into **Good Loan vs Bad Loan** categories using repayment status; identified bad loans accounted for **13.8% of total applications**.
- Built a **3-page Power BI dashboard** (Summary, Overview, Details) with slicers by loan grade, purpose, and term for dynamic exploration.
- Analyzed loan distribution by **purpose, employment length, and home ownership** to uncover borrower behavior patterns and risk segments.

Google Cloud Data Analytics Dashboard using Looker Studio Feb 2026

Google Cloud Platform, BigQuery, Looker Studio

- Built an interactive analytics dashboard using **Looker Studio** connected to **BigQuery** public datasets, selecting dimensions and metrics to surface business trends.
- Designed time-series charts and a clean, structured dashboard layout optimised for non-technical stakeholder consumption.
- Implemented an end-to-end cloud analytics workflow: **Data Warehouse** → **BI Tool** → **Business Dashboard**, replicating a real-world enterprise pipeline.
- Gained hands-on exposure to **GCP ecosystem** — querying large-scale datasets in BigQuery and publishing live reports via Looker Studio.
